

Welcome to the school of the 21st century: green and digital towards the future! The GIS4Schools knowledge journey just started! GIS4Schools is the first European Erasmus+ project that brings GIS technology to upper secondary schools, promoting a new innovative approach to foster the teaching of STE(A)M subjects. This objective will be achieved by allowing pupils to learn about GIS technology and how to use GIS to respond to climate change challenges.

In this frame will take place the event "GIS4Schools: Paving the way for the school of tomorrow"! The event will take place on April 8th from 10 am to 1 pm CET in Paris and online. The event will gather relevant actors from both space and education domains to discuss the need for innovative STEAM learning paths, and how national education policies can increase the interest of STEAM disciplines for the younger generation. More info on the event available here: <https://bit.ly/3GB3EbO>.

Join the event and bring your experience to the discussion! The participation to the event is free of charge but registration is mandatory: <https://bit.ly/3gZF9Ln>
